

Virosart® HF

High-Speed Virus Filtration for MAbs and Recombinant Proteins

Product Information

Virosart® HF combines highest virus safety with excellent capacities. This high-speed virus filter is especially designed for easy implementation into single-use processes. The smart capsule design with low footprint and minimal flushing volumes can be easily implemented into pre-sterilized, ready-to-use assemblies.

Choose your perfect fit from the Sartorius virus clearance strategy summarizing orthogonal technologies, manufacturing solutions, validation support and consultancy. The orthogonal technologies from Sartorius consist of virus inactivation as well as virus removal by chromatography and virus filtration.

The Virosart® product range comprises four different virus retentive membranes to find the best solution for every application. Virosart® HF targets the removal of both small non-enveloped viruses (20 nm) e.g. PPV, MVM and larger enveloped viruses (> 50 nm) e.g. MuLV from biopharmaceutical feed streams.

Application & Positioning

The main applications for Virosart® HF for virus retentive filtration are monoclonal antibodies (mAb), antibody fragments (Fab) or small recombinant proteins (< 150 kDa). Virosart® HF is used at the end of the purification process for virus filtration of the biopharmaceutical product. At this stage the purity of the biopharmaceutical product is the highest and the probability of virus filter blockage due to contaminants (DNA, CHOP, aggregates & lipoproteins) is the lowest.

Even if these contaminants should be removed during the polishing process of the target molecule, small amounts might be sufficient to cause premature blockage of the final virus filter. To prevent this, an efficient pre-filtration step, such as the Virosart® Max*, might be required as protection for the Virosart® HF membrane.

Product Benefits

Virosart® HF provides high virus safety for the biopharmaceutical product. Based on a uniquely modified PES membrane, Virosart® HF provides highest flow rates and excellent capacity. The high packing density of the elements combines extremely low hold up and flushing volumes with low footprint requirements.

The sterile delivery secures ease of use as well as fast installation of the filter elements. Virosart® HF retains ≥ 4 LRV of small non-enveloped viruses (e.g. PPV, MVM) and ≥ 6 LRV of large enveloped viruses (e.g. MuLV). This filter offers high virus safety over the entire flow decay profile independently of operating pressure.

Customized process-specific virus LRV determination can be individually provided by our Confidence® Virus Clearance Services (see page 7 for details).

Integrity Testing

Virosart® HF are tested for integrity using a water-based diffusion test, e.g. based on the Sartocheck® technology of Sartorius Stedim Biotech. Virosart® HF filters have been validated for ≥ 4 LRV removal of small non-enveloped viruses using bacteriophage PP7 as the model virus. Validation data is shown in the validation guide of Virosart® HF.

* Virosart® Max is a specifically optimized virus pre-filter significantly increasing downstream virus filter performance. Virosart® Max is a patented technology (DE 10 2011 105 525 B4) binding aggregates efficiently through hydrophobic interactions with polyamide, independently of process conditions such as conductivity from biological feed streams (Mabs, plasma derivatives or recombinant proteins).

Technical Data

	Lab Module	Mid-Scale Module	Process Module
Nominal filtration area	1.7 cm ² & 5.0 cm ²	200 cm ² & 0.2 m ² 0.22 ft ² & 2.15 ft ²	0.8 m ² & 2.4 m ² 8.6 ft ² & 25.8 ft ²

Materials

Process & Mid-Scale Module	
Resin	Polyurethane
Housing	Polypropylene
Protective sleeving	Polyamid
End caps	Polypropylene

Lab Module	
Resin	Polyurethane
Housing	Polycarbonate
Protective sleeving	Non

Membrane	
Material	Polyetersulfone
Pore size	20 nm nominal
Format	Hollow fiber

Performance

Characteristic Water Flow Rates

Virosart® HF Process Module (2.4 m² | 25.8 ft²)

Virosart® HF Process Module (0.8 m² | 8.6 ft²)

Virosart® HF Mid-Scale Module (0.2 m² | 2.15 ft²)

Virosart® HF Mid-Scale Module (200 cm² | 0.22 ft²)

Virosart® HF Lab Module (5.0 cm²)

Virosart® HF Lab Module (1.7 cm²)

Regulatory Compliance

- Each individual filter is tested for integrity (except 3VI--28-TCGML--V & 3VI--28-BCGML--V) and for water flux during manufacturing
- Validated for ≥ 4 LRV removal of small non-enveloped viruses using bacteriophage PP7
- Designed, developed and manufactured in accordance with an ISO 9001 certified Quality Management System
- Meet or exceed the requirements for WFI quality standards set by the current USP
- Non pyrogenic according to USP Bacterial Endotoxins

Accessories & Services

Adoptive Pre-Filtration

Virosart® Max protects your virus filter irrespective of the process conditions. Virosart® Max will downsize your process and reduce your total virus filtration costs.

Integrity Testing

Fully automated Virosart® integrity testing to guarantee intactness of the Virosart® filter applying pre- and post-use diffusion tests.

Ready-To-Use Filter Transfer Sets

Simplify your daily routine work by using modular filter assembly.

Single-Use Systems

Flexible processing with FlexAct® VR system for production from pilot plants up to commercial processing.

Customized Systems

High level of automation and individual requirements can be relegalized by customized single-use or hybrid solutions.

Sartorius Confidence® Virus Clearance Services are the perfect complement to Virosart® HF filters. Our services provide:

- Virus clearance studies
- Process design support
- Optimization support

We use a variety of different relevant and model viruses including MVM, MuLV, Reo-3 and PRV. The combination of product and services provides you with a comprehensive virus clearance solution that gives you the confidence you need to proceed.

BioOutsource Testing Services

Your partner to assure virus safety for your process by MCB | WCB characterization, bulk harvest testing.
